

We are officially a week out from Christmas, and for many of us around the U.S., it is pretty darn cold. Out of all of the holiday shopping you have done this year (you are done, right?), we hope that shopping for your industrial heating and freeze protection necessities were at the top of the list. If so, congratulations, you have made the Powerblanket Nice List. If not, maybe being on the Naughty List isn't so bad. You might at least get some coal to keep things warm, and you'll be wishing for some coal by the time winter is done with you.

## PLUS: SLEIGH THE COLD WITH US

The holiday season is officially upon us, winter is officially here, and it is frigid all over most of North America. And while you want to be inside cozying up to the fire and drinking hot cocoa with the fam, if you aren't using the right equipment in your freeze protection or winterization plans, then you might need to get that cocoa to go.

When critical materials and equipment need to be warm to function, and processes are vulnerable to the cold, you can't just trust any old industrial heating equipment; you need the most trustworthy products available.

Powerblanket is the brand professionals the world 'round trust to help them control temperatures in their critical operations. Put yourself on the nice list this year and give our industrial heating experts a call to see how we can make your winter season a little more joyous.

## WE'RE GONNA FIND OUT WHO'S NAUGHTY OR NICE

Where freeze protection plans are concerned, we hope you've made your list, and checked it twice. North Pole temperatures and snow are less than magical if your plant's operations are on the line, or your critical materials are in jeopardy. Viscosity control and optimization is critical to keeping pipes clear and flowing, and materials safe and protected.

## PRODUCT SPOTLIGHT:

This Christmas season, gift yourself peace of mind with Powerblanket's viscosity targeted product lines

When you combine industrial grade vinyl, and a patented heat spreading technology, you get a drum heater designed to thrive in rugged environments. No more scorching critical materials from over-heating band heaters, or inefficient base heaters. Our drum heaters are available in 15, 30, and 55 gallon sizes.

Heating IBC totes can be difficult and inefficient to heat in the best of scenarios. Not with Powerblanket. Our tote heaters are designed to fit IBC totes from 250 gallons, up to 550 gallons. In addition to even heating and durability, our tote heaters are easy to install, or remove and store.

One of our most unique heating products is our Hot Box Bulk Material Warmer. Ideal for jobsite freeze protection, you can fit a standard sized pallet inside, allowing you to keep anything from supplies to equipment warm and protected from the elements.

When one of our standard, ready to ship products just isn't enough, our custom team almost always has the answer. Custom products can be anything from modifying our ready to ship products, to designing a customized heater to the specifications of your application. We have a team of engineers dedicated to designing the right heating solution for whatever you need. Whether it's the size of a can of soda or a train car, we can help you heat it.
