

We are cruising through the month of November, so we'd like to wish everyone a Happy Thanksgiving from Powerblanket. This is one of our favorite holidays of the year, and not exactly for the reasons you might think. While we love copious amounts of good food, reliving the glory days in the backyard turkey bowl, and the inevitable family drama from an election year; having a day to reflect on the things we are grateful for is really what makes it so great. The rest is just gravy on top.

The Four "F's of our Thanksgiving Tradition:

FOOD, FAMILY, FOOTBALL, AND FREEZE PROTECTION?

Tradition plays a big part in Thanksgiving celebrations throughout the country each year, many of which are somewhat universal. From doing our best Uncle Rico impressions on the football field (try not to get hurt this year), to loosening the belt to justify that last piece of pie, to falling asleep on the couch while the chaos of way too many people in one house reaches its peak, Thanksgiving always delivers.

Family, food, and football (not always in that order) are generally at the center of Turkey Day. Here at Powerblanket though, we have one more 'F' to give: Freeze Protection. If you've been reading our newsletters lately, you know they are stuffed with our pleas to protect your operations from the cold weather. We are passionate about industrial heating, and have made great strides in bringing innovative heating solutions to a decades-old industry. However, we know that old habits pie hard. So, we do our best to help you update your yearly winterization traditions to include more effective, more reliable, and more importantly; money and time saving solutions.

As Thanksgiving is a great time to reflect on the past, it's also the perfect time to look ahead. What does your freeze protection plan look like, and where can Powerblanket make it better? For any containers like drums, ibc totes, gas cylinders, buckets, or tanks, we have ready-to-ship wraps that are easy to install whenever you need, and will Plymouth rock your world.

For more specialized applications like pipes, valves, holding tanks, or equipment boxes, our Custom Team is the answer you're looking for. They can design, build, and ship a customized heated blanket to you in as little as two weeks. Whether you have specific heating requirements, hazardous locations, or irregular measurements, our Custom Team has the recipe for success, and may just be the key ingredient you need to keep things running this winter.

When it comes to winterizing your plant, factory, facility, or any other type of operation, if you're using something that doesn't work well, it's time to quit it, but not cold turkey. Give us a call today to learn how we can update your winterization traditions and transition your freeze protection plan to one that comes with an extra helping of peace of mind.

FEAST YOUR EYES ON THIS MONTH'S FEATURED PRODUCTS

Here at Powerblanket, innovation is at the core of why we do what we do. Seeing a problem, then coming up with a solution for it is the theme of our origin story. That's why we are always looking for ways to improve our products, broaden their applications, and make them more efficient and user friendly. Check out our newest product lines below.

Drum Tops & Bottoms

Maximize the thermal efficiency of your 55-gallon, 30-gallon, and 15-gallon drums or 5-gallon buckets with our state-of-the-art insulated covers. Perfectly complementing Powerblanket's drum and barrel heaters, these covers are the ultimate solution for maintaining the temperature of your contents, ensuring protection against even the harshest winter conditions.

HOT BOX FAN

Discover the transformative power of Hot Box Fans, the essential addition to Powerblanket's bulk material warmers. Designed for versatility and efficiency, these fans are your go-to solution for maintaining optimal temperatures in the most demanding environments. By promoting continuous air circulation, they ensure uniform temperature distribution and prevent stagnation, keeping your materials in prime condition.

High Temp Drum Heater

Powerblanket's 55-gallon drum heaters provide a range of heating solutions for warming and storing temperature-sensitive materials. Our new Pro model is designed for materials that need to be maintained at a higher temperature, maintaining temperatures up to 185 F. All of our 55-gallon drum heaters come as an insulated full-wrap design with cinch straps to secure a tight fit. They're also water-resistant and can be used on poly and steel drums.

Powerblanket Connect

Powerblanket Connect products offer unparalleled control and efficiency by combining advanced heating solutions with smart technology. With real-time monitoring and remote access, users can easily manage temperatures, optimize energy consumption, and prevent downtime from anywhere. This connected system ensures precise temperature regulation, protecting valu-

Curemax

CureMax is a revolutionary line of high-performance heating blankets by Powerblanket. It's specifically engineered to meet the toughest demands of high-temperature curing and high-temperature curing equipment in industrial applications. Designed for ultimate efficiency, CureMax blankets deliver twice the heating power. They can reach up to 190°F, ensuring your projects stay on schedule, even in extreme conditions.
