

## MA-900

The MA900 is suitable for various industries, such as plastic machines and industrial furnaces. A wire-bonding machine in semiconductor industry usually requires a 4 to 8 zone temperature control, which is ideal for the MA900. The MA900 provides an optional Modbus communication protocol, which increases the number of connectable PLCs and HMI/MMIs.

### MA900

The MA900 can control up to a maximum of **4 channels** in a compact 1/4 DIN size. This 1/4 DIN size (96mm) controller reduces the panel size and panel cutouts.

- 4 channel control
- Multi-memory area
- Heat/Cool action
- Digital contact input
- Various alarm functions
- Close horizontal mounting
