

SA-200

The SA200 is a compact instrument with abundant display functions. It can be used not only as a controller but also as an (indicating) alarm unit. In the semiconductor industry, an alarm signal is critical and must work without failure. It is common to use a controller and an over-temperature protector for each zone. The SA200, when used as an over-temperature protector, can be used with its PV display turned off.

SA200

The SA200 is a new high performance temperature controller specifically designed for applications where panel space is critical yet maximum control performance is required!

- 1/32 DIN size with dual display
- Close vertical and horizontal mounting
- Self-tuning and autotuning
- Loop break alarm and temperature alarms
- Digital communications with both MODBUS and RKC protocols
