CAST-X 2500Circulation Heater

The CAST-X 2500 is our most compact dual-tube model, a powerful and versatile mid-sized heater.

Designed and manufactured by Cast Aluminum Solutions (CAS), CAST-X Circulation Heaters are engineered using the latest thermal modeling and finite element analysis technology. CAST-X heaters feature low-watt-density heating elements cast into aluminum bodies which also contain the helical-coiled stainless steel flowpath tubes.

The media is sequestered in these tubes, never touching the heating elements: a critical safety benefit, especially when heating explosive or sensitive media. All CAST-X units are capable of heating liquids and gases alike.

CAST-X heaters are self-draining, for safety and cleanliness. With compact, non-welded bodies, plus NEMA & ATEX enclosures, CAST-X units are small-footprint, high-output heaters that meet the needs of high-purity processes, flammable operations, and your most critical heating applications.

"BB" to "F" Sections

After selecting your AAA number, use the charts on this page to select your BB, C, D, E and F designations.

(always selecting your number from the far left column)

THERMOCOUPLES		
All thermocouples are ungrounded, for optimal performance		
Designation "DD"	Description	
0	NONE	
1	SINGLE J-TYPE THERMOCOUPLE IN THERMOWELL
