## PREDICTING THE WEATHER IS QUITE LABORIOUS

April was a busy month if you're in the business world. Accountants and tax professionals around the country breathed a sigh of relief over the last few weeks as tax season ended in the U.S. In the meantime, new fiscal years began, fresh goals were set, and budgets planned for the rest of the year. Now that we're past all that busyness, we can focus on how we're going to celebrate Star Wars Day and Cinco de Mayo next week.

Now that the weather is warming up, it is easy to forget the headaches and unease you may have felt just a few months ago when cold temperatures were threatening your operations. Remember, winter is just around the corner. You shouldn't be saying "I've got a bad feeling about this" every time fall ends and temperatures drop. We are here to let you know that Powerblanket Custom is the solution you've been looking for, and we may be your only hope.

If you aren't yet familiar with Powerblanket Custom solutions, you've been missing out. Our unofficial motto is that we can make heated blankets that can wrap anything as small as a soda can to as big as the Millennium Falcon or a train car. If you have anything that needs to be heated, but may have a unique design, shape, or heating requirements that prevent other winterization products from working, our custom team can help design a perfect solution to your problem.

Once our team understands the specs your solution requires, they will be able to design, build, and ship your custom manufactured Powerblanket within just a few weeks. Let's just say that our custom capabilities will bring balance to your winterization plan.

## PRODUCT SPOTLIGHT:

### DRUM TOP AND BOTTOM COVERS

We have exciting news! We have released a new line of drum heater accessories on the Powerblanket website. While our drum and barrel heating blankets have been the best on the market for many years now, we have wanted to make sure that we are making them as efficient as possible. Our proprietary design ensures that heat spreads evenly through the blankets to the surface of the drums, avoiding burning and cold spots throughout the material being warmed.

This month, we are introducing insulated tops and bottoms for all sizes of drum and barrel heater blankets we offer. These new accessories will improve the efficiency of your drum heater by up to 39%!
