## What Certifications do we offer on our heaters?

**CSA** (Canadian Standards Association) and **UL** (Underwriters Laboratories) Standards (**NRTL**) Certification are processes to ensure that products meet specific safety and quality standards required in the US and Canada. This certification is crucial for products being sold in these markets to comply with nationally accepted standards.

**CSA** marks are widely accepted by many government and code officials, regulatory and regulation bodies, leading retailers, and Authorities Having Jurisdiction (**AHJ**). The **CSA** mark demonstrates that a product has been rigorously tested to applicable standards. These include standards written or administered by the American National Standards Institute (**ANSI**), Underwriters Laboratories (**UL**), CSA Group (**CSA**), NSF International (**NSF**), and other North American and global organizations.

**ASME** certification, or the American Society of Mechanical Engineers' (**ASME**) Conformity Assessment (**CA**) Certification and Accreditation programs, show that a company's products, services, or procedures meet safety, quality, and reliability standards
