

**<u>RKC</u>** RKC INSTRUMENT INC.

# **Digital Indicator**

High grade indicator has been redesigned for better visibility and more functions.

Resolution 1/100°C is available (RTD input)

### Bright, Easy-To-Read LED Displays

Very clear and easy-to-read large LED display. Brightness has been increased to the double of RKC's conventional Digital Indicator REX-AD410.

Alarm status can be checked at a glance with alternate display of alarm characters.

• Alarm character and PV alternate display at the time of alarm state.

(when alarm 3 is in alarm state)

Incorporates the following features on the same hardware:

Alternate display can be independently selected at each alarm (1 to 6).

Numerous Input and Outputs (Optional)

(Optional)

### Panel space saving : 60mm

The AG500 has very short depth as a 1/8 DIN size indicator.

- Contact input (max. 2 points) Alarm output (max. 6 points)
  - Analog retransmission output

## 12/24V DC Sensor power supply

Available with sensor power supply. Supply voltage can be specified from 12Vdc or 24Vdc.

• When 24V DC sensor power supply is used, alarm output is max. 5 points.

When 12V DC sensor power supply/LED drive supply for SP500 is used, alarm output is max. 5 points.

### **Standard Function**

#### Alarm function

#### Alarm delay timer

When an alarm condition becomes ON status, the output is suppressed until the Delay Timer set time elapses. After the time is up, if the alarm output is still ON status, the output will be produced.

#### Hold action

Hold action is an action which makes an alarm function invalid even if measured value (PV) is in an alarm status at the time of power-ON. This state continues until the above measured-value (PV)

This state continues until the above measured-value (PV) once exits from an alarm status.

Alarm energized/de-energized action selection

Display function

Peak and Bottom Hold Function

The AG500 memorizes the maximum and minimum measured value. Optional contact input enables you to remotely reset the value.

Measured value (PV)
Peak Hold
Bottom Hold

Power-ON

#### PV Bias and PV Ratio

PV bias adds bias to the measured value (PV). The PV bias is used to compensate the individual variations of the sensors or correct the difference between the measured value (PV) of other instruments.

PV ratio is a multiplier to be applied to the measured value (PV). The PV ratio is used to compensate the individual variations of the sensors or correct the difference between the measured value (PV) of other instruments.

PV bias and PV ratio is available simultaneously..

### **Specifications**

Input	
Input Measuring accuracy	<ul> <li>Universal input (See Input range Code Table)</li> <li>a)Thermocouple</li> <li>Type : K, J, T, E, PLII, U, L</li> <li>Less than -100°C (-148°F) : ±1.0°C (±1.8°F)</li> <li>-100 to +500°C (-148 to 932°F) : ±0.5°C (±0.9°F)</li> <li>More than 500°C (932°F) : ±0.1% of reading + 1 digit)</li> <li>Type : N, S, R, W5Re/W26Re</li> <li>Less than 0°C (32°F) : ±2.0°C (±3.6°F)</li> <li>0 to 1000°C (32 to 1832°F) : ±1.0°C (±1.8°F)</li> <li>More than 1000°C (1832°F) : ±1.0°C (±1.8°F)</li> <li>More than 1000°C (752°F) : ±1.0°C (±1.8°F)</li> <li>More than 1000°C (752°F) : ±1.0°C (±126°F)</li> <li>400 to 1000°C (752 to 1832°F) : ±1.0°C (±1.8°F)</li> <li>More than 1000°C (1832°F) : ±0.1% of reading + 1 digit)</li> <li>Type B</li> <li>Less than 400°C (1832°F) : ±0.1% of reading + 1 digit)</li> <li>* Cold junction temperature compensation error</li> <li>±1.5°C (1.8°F) [Between 5 and 40°C (41 and 104°F)]</li> <li>±1.5°C (12.7°F) [Between -10 and 5°C (16 and 41°F), and 40 s°C (104 and 122°F)]</li> <li>b) RTD</li> </ul>
Sampling time	Less than 200°C (392°F) : ±0.2°C (±0.4°F) More than 200°C (392°F) : ±(0.1% of reading + 1 digit) c) DC voltage and DC current ±(0.1% of span) 0 1sec
Input impedance	a) Temperature, Low voltage input group : More than $1M\Omega$ b) High voltage input group : Approx $1M\Omega$ c) Current Input : $50\Omega$ Approx $250\mu A$ (RTD input): 0.20V/Q (Thermocouple input)
Influence of lead resistance Influence of lead resistance Input break action	0.01% of reading/Ω (RTD input)         • Maximum 10Ω per wire         Thermocouple input : Up-scale/Down-scale (Selectable)         RTD input :       Up-scale         Low voltage input :       Up-scale (Selectable)         Current input :       Value around 0mA
Input short action Input digital filter PV bias PV ratio	High voltage input : Value around 0V Down-scale (RTD input) 0.1 to 100.0 sec. (OFF when 0 is set.) -span to +span 0.500 to 1.500
Hold function	
Peak hold Bottom hold	<ul> <li>Highest measured value is held</li> <li>Lowest measured value is held</li> <li>The held values can be reset manually, by external contact signal or by communication after the confirmation by the operator.</li> <li>Data is not backed up when the instrument power supply is off.</li> </ul>
Display	
Display digit Flashing function	5-digits (The most significant digit : -1 or 1) Flashing display at input error or event occurrence • Settable flashing function from each event 1 to 6.
Alarm function	n (Optional)
Number of alarms	Up to 6 points • With 12V DC sensor power supply : Up to 5 points • With 24V DC sensor power supply : Up to 2 points
Alarm type	Process High, Process low     Hold action is available
Alarm output	Relay contact output, Form a contact 250V AC 3A, 30V DC 1A (Resistive load) • Electric life : 300,000 cycles or more
Differential gap Other function	0 to input span a) Energized/de-energized action is configurable. b) Delay timer : 0.0 to 600.0 sec c) Interlock (latch) function is configurable.

Digital Input (	Optional)
Number of inputs	2 points (DI1 and DI2)
Input method	Non-voltage contact input (OPEN : $500k\Omega$ or more, CLOSE : $10\Omega$ or less)
Determination time Function	50ms DI1 : Hold reset, DI2 : Alarm interlock reset)
Analog Retran	smission Output (AO) (Optional)
Output signal	
Output signal	Load resistance : More than 1k0
	Output impedance : Less than $0.10$
	0 to 10mV DC 0 to 100mV DC
	Load resistance : More than $20k\Omega$ )
	Output impedance : Less than $10 \dot{\Omega}$
	4 to 20mA DC, 0 to 20mA DC
	Load resistance : Less than $600\Omega$
Outrast to us a	Output impedance : More than $1M\Omega$
	+0.1% of span
Output accuracy	More than 12 bits
output recolution	
Communicatio	on (Optional)
Communication	RS-485 (2-wire), RS-422A (4-wire)
method	a) ANSI X3.28 sub-category 2.5A4 (RKC standard)
	• Selectable
Synchronous method	Half-duplex start-stop synchronous type
Communication	2400bps, 4800bps, 9600bps, 19200bps, 38400bps
speed	
Bit format	Start bit :1, Data bit : 7 or 8 (For MODBUS 8 bit only)
Movimum connection	Parity bit : 1 (odd or even) or none, Stop bit : 1 or 2
Communication data	7 or 6 digits
digits	, et e algite
Sensor Power	Supply (Optional)
Output voltage	24V DC ±1.2V or 12V DC ±1V
Output current	24V DC type : Less than 24mA DC
	12V/DC type : Loce than $20mA/DC$
Lood registeres	24V DC type : Less than 1k0
Load resistance	24V DC type : More than $1k\Omega$ 12V DC type : More than $600\Omega$
Load resistance	24V DC type : More than $1k\Omega$ 12V DC type : More than $600\Omega$
Load resistance	24V DC type : Hore than $1k\Omega$ 12V DC type : More than $600\Omega$ fications

#### Quick start code

 Quick start code tells the factory to ship with each parameter preset to the values detailed as specified by the customer. Quick start code is not necessarily specified when ordering, unless the

preset is requested. These parameters are software selectable items and can be re-programmed in the field via the manual.

Specification	Quick start code
